General

Since LabBook 3, LabBook backups and restorations are managed directly from the application under the "root" account. LabBook Config, which was previously used, is no longer part of the LabBook installation. When you are logged in as "root", a "Backup Management" icon appears on the home page

LabBook backups are encrypted using a backup key. This key is copied to the backup media, which allows you to restore your backups on a machine other than the one on which they were created. Naturally, to ensure that your backups are protected, the backup key is itself protected by a backup password that you must keep carefully and that will be indispensable for restoring your data.

The LabBook 3 restore supports backups of previous LabBook versions 2.5 and 2.9. Please note, however, that to restore a LabBook 2.9 backup, the backup media must not contain a LabBook 2.5 backup. Please refer to the paragraph on restoration if you wish to restore your LabBook data after installing your system.

LabBook saves on removable media connected to your server. For this media to be accessible, you must connect with the user 'user_labbook' on your system console. Be careful, you must insert the media after the connection.

Before you can back up or restore LabBook, you must set the user's password to "user_labbook".

Then for your backups to be operational you must:

- Generate a backup key,
- If necessary, record the time of automatic backups,
- If necessary, initialize a new backup media.

Change the password of "user_labbook"

When LabBook was installed, a user "user_labbook" was created. This user is necessary for you to have access to the backup media that you connect to the LabBook server. You must connect under "user_labbook" from the console of your server. During installation, a trivial password "user_labbook" was assigned to "user_labbook". This password must be changed at the first connection.

Messages will guide you through this process, you will first need to enter the current password (user_labbook):

Then you will have to enter and confirm the new password:

Backup management page

The "Backup Set up" icon or the "Settings > Backup Set Up" menu choice will take you to this page:

	Backup setup
MODIFY BACKUP TIME	Backup time 12:00 S
INITIALIZE THE MEDIA	Last backup OK :
GENERATE BACKUP KEY	
SAVE	
RESTORE	
Back	

On the left you will find the buttons corresponding to the different actions available:

- **MODIFY BACKUP TIME** allows you to set the time for automatic backups.
- INITIALIZING THE MEDIA is necessary before you can use new media to save LabBook.
- **GENERATE BACKUP KEY** is required before you can back up LabBook.
- **SAVE** launches an immediate backup.
- **RESTORE** allows you to restore data.

These actions are detailed in the following paragraphs.

The right side of the screen gives information about the status of the backups:

- Backup time displays the time of automatic backups,
- Last backup indicates the status (OK/ERR) and the time of the last backup, whether it was started manually or automatically,
- Last backup OK indicates the time of the last successful backup. This information allows you to check if automatic backups are running correctly.

Save time for automatic backups

MODIFIER HEURE SAUVEGARDE

The button allows you to save the automatic backup at the time indicated on the right side of the screen. If you wish to change the time, you must first change it on the right-hand side and then use the button to activate programming at the time indicated.

You will be asked for confirmation:

Merci de confirmer la modification de l'heur	re de sauvegarde quotidienne.
	Annuler OK

You will need to provide the password of the user "user_labbook" to perform this action.

Veuillez saisir le mot de passe de l'utilisateur user_labbook	Х
Mot de passe système	
Valid	er Annuler

Note: You must use this function for the first time to activate automatic backups after installing LabBook 3. The default time is 12:00 p.m. but automatic backups are not active by default.

NB: An initialized media must be connected when the automatic backup starts. There is no reminder in the application, so it is probably most practical to leave a media connected permanently. If possible, we advise you to use a rotation principle between several media kept in different locations.

NB: If you restart the server, remember to reconnect the backup media by logging in as "user_labbook" on the server console.

Initialize the media

You

INITIALISER LE MEDIA

LabBook places the backups in a "SIGL_backups" folder at the root of the media. This prevents automatic backups from being written to media that are connected at the time.

The initialization of the media consists in creating this folder.

You will need to provide the password of the user "user_labbook" to perform this action.

	Veuillez saisir le mot de passe de l'utilisateur user_labbook	х
	Mot de passe système	
	Valide	er Annuler
will	I need to select the media to initialize:	
	Veuillez sélectionner le média	Х
	Liste des médias disponibles USB 🚽	
	Valid	ler Annuler

NB: for the automatic backup to work, only one initialized media must be connected.

7

Generate the backup key

GENERER CLE DE SAUVEGARDE

Before backups can be made, a custom encryption key must be generated. This key is copied to the backup media, allowing you to restore your backups on a different machine than the one on which they were created.

The backup key is protected by a password that you will be asked for:

Mot de passe		
Confirmation		

Backups can only be restored with the key used when they were created. Unless you lose the password for your backup key, you should not need to generate a new key. If you trigger a new generation, you will be prompted for confirmation:

Une clé existe déjà si vous re-générez une clé les anciennes sauvegardes ne seront pas récupérables
Vous confirmez la génération d'une nouvelle clé ?

OK

CAUTION: There is no way to recover a lost encryption key password. If this is the case, you must generate a new backup key.

Save

SAUVEGARDER

The LabBook data backup process creates an archive containing your database as well as the generated and downloaded documents on your system. This archive is encrypted using your backup key and placed on the USB device.

LabBook 3 backups appear on the USB media as files named:

backup_v30_SIGL_horodatage.tar.gz.gpg

The timestamp indicates the time the backup was made.

You will need to provide the password of the user "user_labbook" to perform this action:

	Veuillez saisir le mot de passe de l'utilisateur use	r_labbook	х
	Mot de passe système		
		Valider Ann	uler
Then ch	oose the media:		
	Veuillez sélectionner le média		х
	Liste des médias disponibles USB 🔽		
		Valider Ann	uler

A patience message is displayed during the backup. It contains an indication of the current operation with its start date and time, which is refreshed periodically:

	Processus en cours	х	8	
	Veuillez patienter 🛟 Copie de la base de données 2021-06-10 09:26:42			
E SAUVEGARDE		ricure de sauveyd	urde	12:
R LE MEDIA		Dernière sauvegar	de :	
E SAUVEGARDE		Dernière sauvegarde	e OK :	
ARDER				
URER				

The end of the backup is also indicated:

E	Dernière sauvegare	le OK :
	Sauvegarde réussie	
	ΟΚ	

Status of the backup

The main screen of LabBook indicates the status of the last backup, with a green or red indication of whether the last backup was successful or not. And you will get an alert message if the backup of yesterday was not completed.

Restore

RESTAURER

ATTENTION this operation replaces the current data.

LabBook 3 recovery supports backups of previous LabBook versions 2.5 and 2.9. However, to restore a LabBook 2.9 backup, the backup media must not contain a LabBook 2.5 backup.

Note: LabBook 2.5 backups do not contain generated and downloaded documents.

You will need to provide the password of the user "user_labbook" to perform this action:

	Veuillez saisir le m	ot de passe de l'utilisateur user_labbook	Х
	Mot de passe systè	me	
		Valider	Annuler
Then in	dicate the passwor	d of the backup key used during the back	up:
	Veuillez saisir le m	ot de passe pour la clé de sauvegarde	Х
	Mot de passe		
		Valider	Annuler

Note: this password is not used when you restore a LabBook 2.5 backup.

Then choose the media:

	Veuillez sélectionner le média		Х
	Liste des médias disponibles USB 🔽		
		Valider	Annuler
Finally,	the backup to restore:		
	Veuillez sélectionner la sauvegarde à restaurer		х
	Liste des sauvegardes disponibles		
	backup_v30_SIGL_2021-04-02_12h00m34s.tar.gz.gpg 🔽		
		Valider	Annuler

The restore operation deletes the current data. You will be asked for a final confirmation:

Merci de confirmer le lancement immédiat de la restauration.

Annuler

A patience message is displayed during the restoration. It contains an indication of the current operation with its start date and time, which is refreshed periodically:

	Processus en cours	х	
	Veuillez patienter 🏠 Chargement de la base de données 2021-06-10 09:36:49		
/EGARDE		neare ac surveyarde	
ÐIA		Dernière sauvegarde :	
/EGARDE]	Dernière sauvegarde OK :	
3			

Warning: in some cases, the restoration may take several tens of minutes. It is important to be patient while the above message is displayed.

When the restoration is complete, the LabBook application must be restarted. You will be asked to confirm the restart, but except in exceptional cases you must confirm the restart:

La restauration est terminée, LabBook va redémarrer les services de l'application	I
Annuler	

After a few moments you will need to reload the page to continue using the application. A message will indicate this, but please note that it may take a few more moments before the reload works:

Les services ont redémarré ou une erreur est survenue lors de la demande veuillez recharger la page	de redémarrage
	ОК
