For the transfer form template	16
For the administrative file label template	19
For the billing template	20
For the billing statement template	21
For the activity report template	22

Modify a document template

Existing templates are available in the administrator area.

The screenshot shows the 'Paramétrage des modèles de documents' (Document Model Configuration) page in the LabBook administrator area. The page header includes the LabBook logo and navigation icons for 'Paramétrages', 'Qualité', and 'Non conformité'. Below the header, a yellow bar indicates the current page title. The main content area shows a table of document models with 5 rows. The table columns are 'Action', 'Nom', 'Type', 'Défaut', and 'Fichier'. Each row includes an information icon and a download icon. Below the table, there are navigation links for 'Premier', 'Précédent', '1', 'Suivant', and 'Dernier', and a green 'Retour' button.

Action	Nom	Type	Défaut	Fichier
 ▼	Modèle code QR	QRC	✓	
 ▼	Modèle étiquette	STI	✓	
 ▼	Modèle résultat	RES	✓	
 ▼	Modèle résultat avec un code QR	RES		
 ▼	Modèle résultat écriture de droite à gauche	RES		

Premier Précédent 1 Suivant Dernier

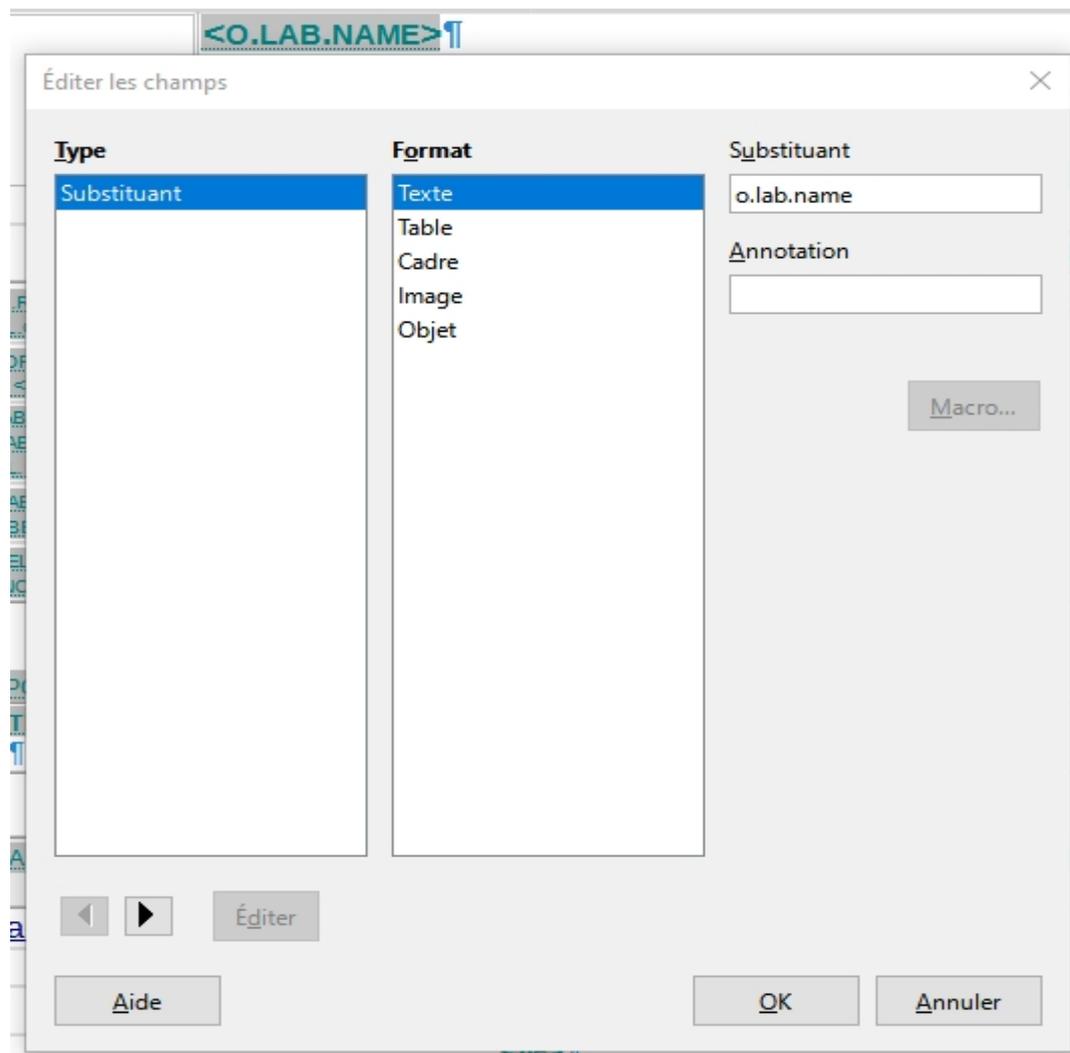

[Retour](#)

They are in ODT format and can be edited with LibreOffice or OpenOffice (except for QR code templates).

This document does not explain how to paginate a document, but rather how to make certain parts of a document variable so that LabBook can complete them.

Defining a variable

You need to insert a "placeholder." Insert => Fields
=> Other fields

The syntax in the "Substitute" field is as follows:
o.category_name.data_name.

(see list of data available at the end of the document).

You can then change the font style to suit your preferences.

Define a logical test

IF test

Via a substitute: Insert => Fields => Other fields.

In the example, the complete substitute is: `if test="o.report.full_comm == 'Y' and o.rec.comm"`.

The screenshot shows the 'Éditer les champs' dialog box with the following configuration:

Type	Format	Substituant
Substituant	Texte	if test="o.report.full_comm =
	Table	
	Cadre	
	Image	
	Objet	

Below the 'Substituant' field, there is an 'Annotation' field and a 'Macro...' button.

All tests must be closed with their equivalent using the following syntax.

The screenshot shows the 'Éditer les champs' dialog box with the following configuration:

Type	Format	Substituant
Substituant	Texte	/if
	Table	
	Cadre	
	Image	
	Objet	

Below the 'Substituant' field, there is an 'Annotation' field.

CHOOSE test

Via a hyperlink: Insert => Hyperlink.

```

for each="res in data.l_res"
<RES_LABEL>
choose
when bold_value == 'Y'
  <RES.VALUE> </IF>
  TEST="RES.UNIT"> <RES.UNI
  T> </IF>
when
otherwise
  <RES.VALUE> </IF>
  TEST="RES.UNIT"> <RES.UNI
  T> </IF>
/otherwise
/choose
<RES.REFERENCES>
<RES.PREV_DATE>
<RES.PREV_VAL> </IF>
TEST="RES.UNIT">
<RES.PREV_UNIT> </IF>

```

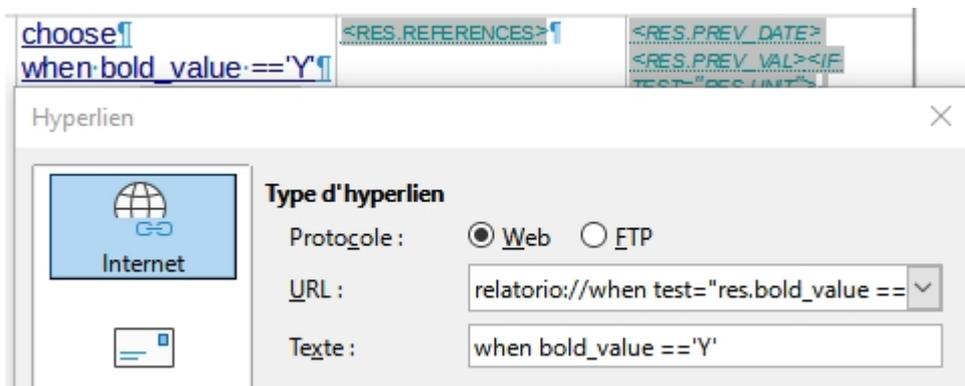

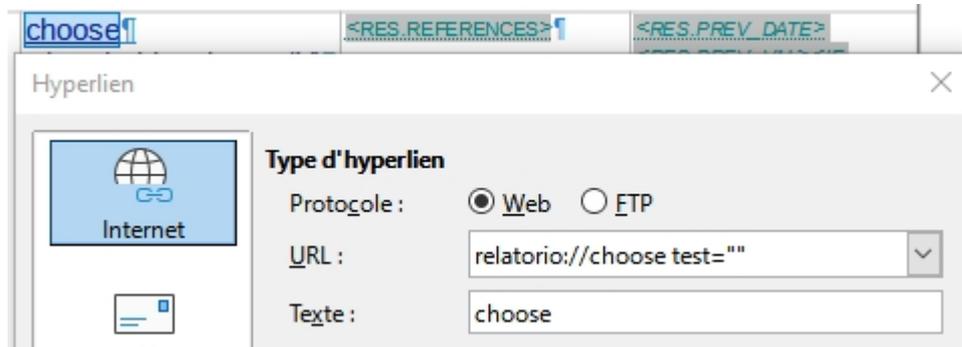

The principle is to choose between two or more options.

Here, we want to use bold when bold_value equals Y and normal font when it does not equal Y.

Define a hyperlink opening CHOOSE followed by one (or more) hyperlinks WHEN then /WHEN, then OTHERWISE and /OTHERWISE, and finally conclude with /CHOOSE.

Hyperlinks must follow the following syntax in the URL field: relatorio://...

Note: The *Text* section can be filled in as you wish, only the *URL* section must follow the required syntax.

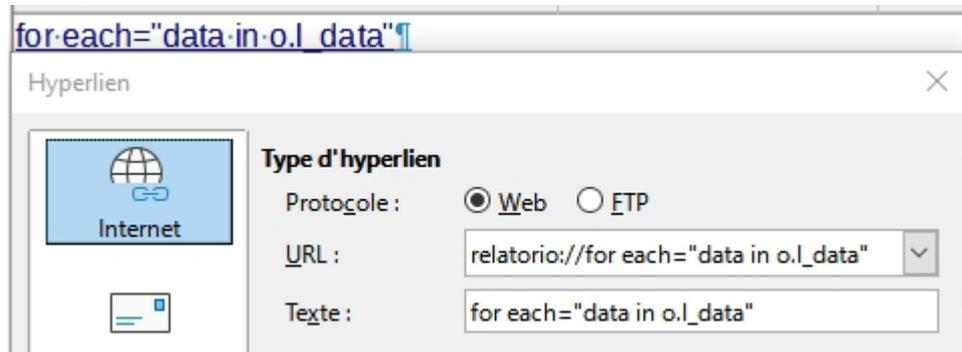

FOR loop

Via a hyperlink: Insert => Hyperlink.

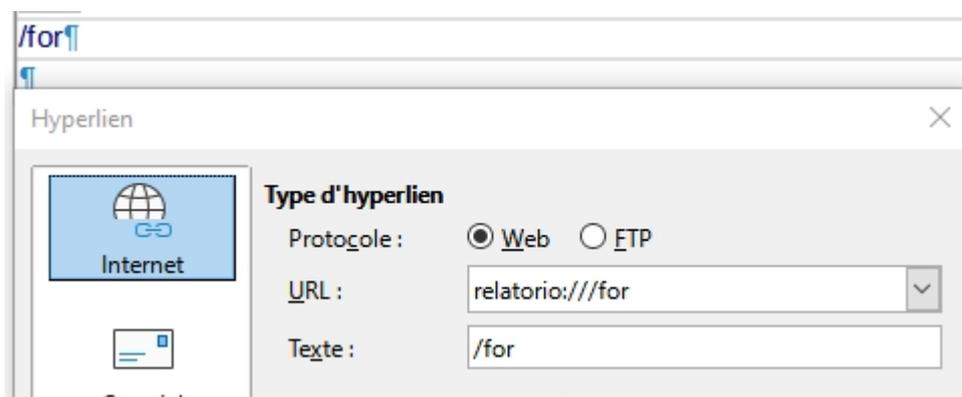

To repeat a paragraph or line with a set of data (such as o.l_data and o.l_data.l_res).

<O.LABEL.ANALYZES>¶	<O.LABEL.RESULTS>¶	<O.LABEL.REFERENCE S>¶	<O.LABEL.PREVIOUS>¶
for-each="data-in-o.l_data"¶			
<IF-TEST="DATA.FAM_NAME">¶			
<DATA.FAM_NAME>¶			
</IF>¶			

Open the FOR with a hyperlink

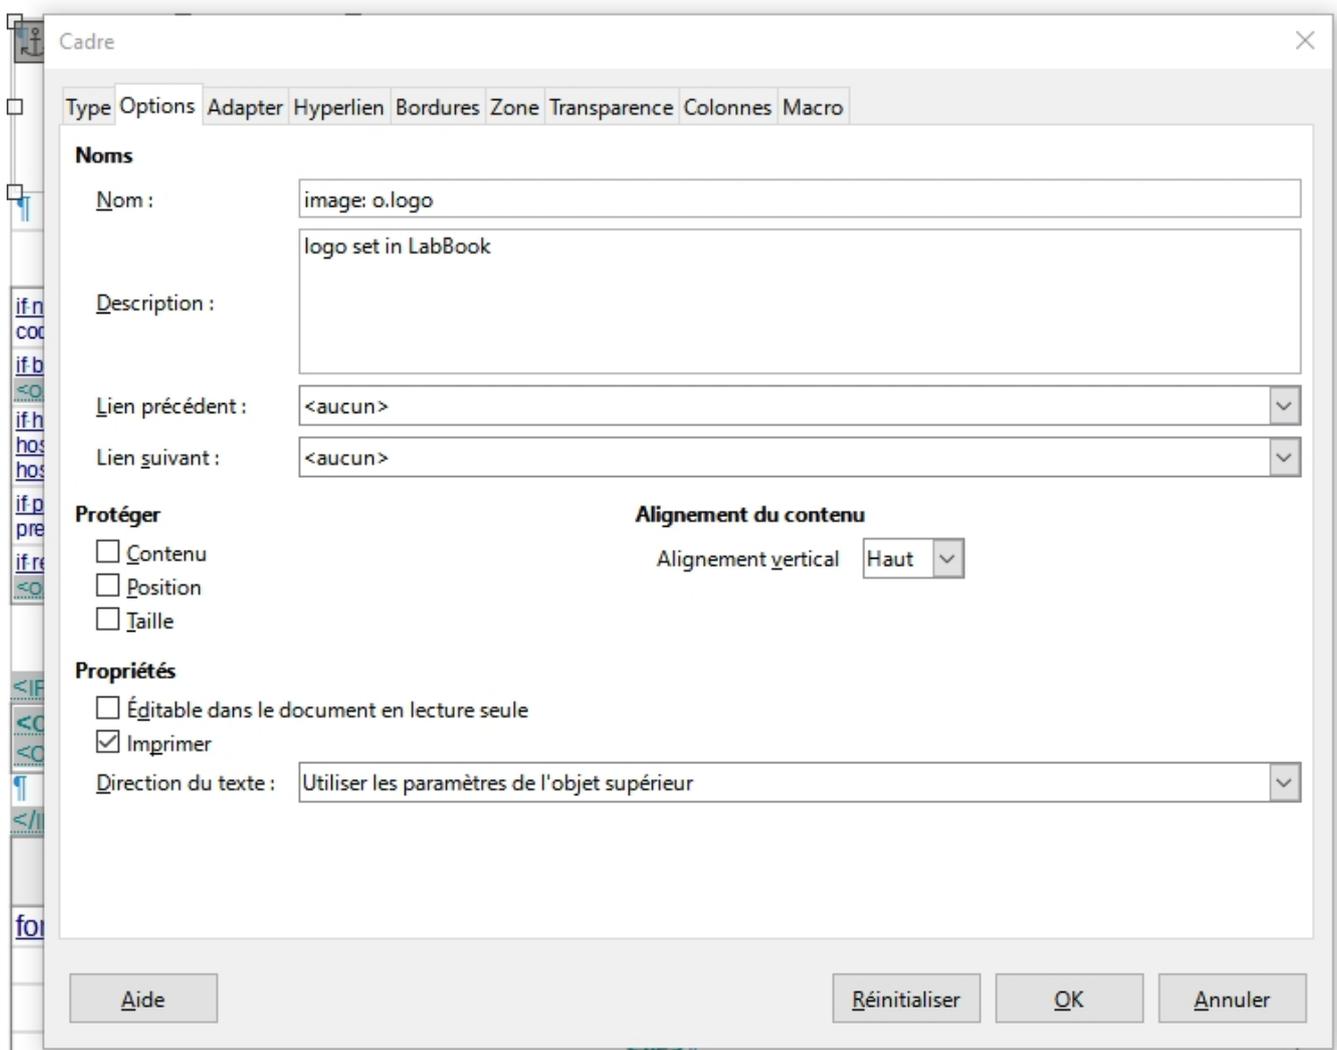

Close the FOR with a hyperlink

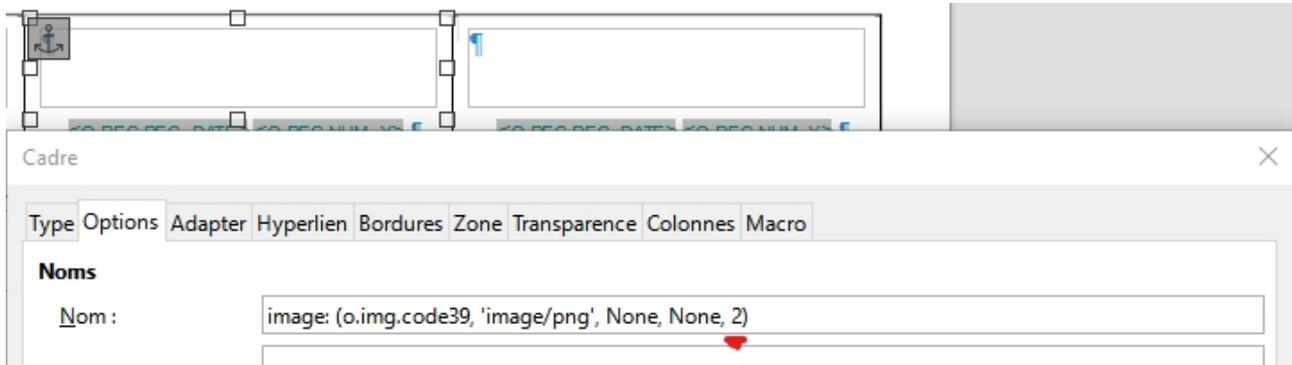

Define a frame for an image

Insert => Frame

The syntax to use in the Options tab, then in the name fields, is as follows: `image: o.category.data_name`

To replicate an image several times on the same template, you must adapt the simple syntax mentioned above, ensuring that the ending number is unique in your template for each image.

Define a QR code template

QRC templates are used to generate an image in the form of a QR code.

This image can be inserted into a result template (see: Defining a frame for an image).

Only one QR code can be inserted into a result template.

This generation is triggered by setting an analysis variable in the repository (Example analysis B4274).

Générer un code QR Oui Non

The QR code template is in TOML format

Default example provided:

```
# -*- coding:utf-8 -*-
version = 1

[QRcode]
# Integer from 1 to 40 that controls the size of the QR Code (the smallest,
# version 1, is a 21x21 matrix)
# Set to 0 and use the fit parameter when making the code to determine this
# automatically.

version = 0

# Options: L, M, Q, H (respectively 7%, 15%, 25%, 30% or less errors can be
# corrected)

error_correction = "H"

# Dynamic value options:
# {{ o.rec.rec_date }}, {{ o.rec.num_y }}, {{ o.rec.num_m }}, {{ o.rec.num_d }}
# {{ o.pat.lastname }}, {{ o.pat.firstname }}, {{ pat.maidenname }}, {{
# o.pat.middlename }},
# {{ o.pat.code_lab }}, {{ o.pat.code }}, {{ o.pat.sex }}, {{ o.pat.age }}, {{
# o.pat.age_unit }}
# {{ o.res.value }}, {{ o.res.unit }}, {{ o.res.valid_date }}

text = "{{ o.pat.lastname }} {{ o.pat.firstname }} , {{ o.pat.code_lab }} , {{
o.pat.sex }} , {{ o.pat.age }} {{ o.pat.age_unit }} , {{ o.res.valid_date }} ,
{{ o.res.value }}"
```
